

ABSTRACT

An airbag arrangement including an airbag, a gas generator and a housing. The housing includes an outlet for letting gas out of the airbag arrangement and a passage for allowing gas from the gas generator into the housing. A closing device is provided. The closing device can be adjusted between an open position, in which the outlet is open and the passage is at least partially closed, and a closed position, in which the outlet opening is closed and the passage opening is open. A releasable lock is provided for locking the closing device in the open position.
